The human race is only one small species in the living world. Many other species exist on this planet. However, human beings (26)\_\_\_\_\_ a great influence on the rest of the world. They are changing the environment by building cities and villages where forests once stood. They are affecting the water supply by using water for industry and agriculture. They are changing weather conditions by (27)\_\_\_\_\_ trees in the forests. And they are destroying the air by adding pollutants to it.

It can be said that human beings are changing the environment in all respects through their actions and by their habits. This has resulted in two serious (28)\_\_\_\_\_. The first is that many kinds of rare animals are killed. The second is that the environment where these animals are living is badly destroyed. As a result, the number of rare animals is decreasing so rapidly that they are in danger of becoming extinct.

In order to make sure that these rare animals do not disappear, efforts have been made (29)\_\_\_\_\_ the environments in which they live. Scientists have made lists of (30)\_\_\_\_\_ species and suggested ways to save them. Many organisations have been set up and funds have been raised. Thousands of national parks all over the world have been established to protect endangered animals. Laws have been introduced to prohibit the killing of endangered animals and the destruction of the environments where these rare animals are living.

**Part 2. Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions. (1.05P).**

Today we take electricity for granted and perhaps we do not realize just how useful this discovery has been. Steam was the first invention that replaced wind power. It was used to drive engines and was passed through pipes and radiators to warm rooms. Petrol mixed with air was the next invention that provided power. Exploded in a cylinder, it drove a motor engine. Beyond these simple and direct uses, those forms have not much adaptability. On the other hand, we make use of electricity in thousands of ways. From the powerful voltages that drive our electric trains to the tiny current needed to work a simple calculator, and from the huge electric magnet in steel works that can lift 10 tons to the tiny electric magnet in a doorbell, all are powered by electricity. An electric current can be made with equal ease to heat a huge mass of molten metal in a furnace, or to boil a jug for a cup of coffee. Other than atomic energy, which has not as yet been harnessed to the full, electricity is the greatest power in the world. It is flexible, and so adaptable for any task for which it is wanted. It travels so easily and with incredible speed along wires or conductors that it can be supplied instantly over vast distances. To **generate** electricity, huge turbines or generators must be turned. In Australia they use coal or water to drive this machinery. When dams are built, falling water is used to drive the turbines without polluting the atmosphere with smoke from coal. Atomic power is used in several countries but there is always the fear of an accident. A tragedy once occurred at Chernobyl, in Ukraine, at an atomic power plant used to make electricity. The reactor leaked, which caused many deaths through radiation. Now scientists are examining new ways of creating electricity without harmful effects to the environment. They may harness the tides as they flow in and out of bays. Most importantly, they hope to trap sunlight more efficiently. We do use solar heaters for swimming pools but as yet improvement in the capacity of the solar cells to create more current is necessary. When this happens, electric cars will be viable and the world will rid itself of the toxic gases given off by trucks and cars that burn fossil fuels.

**Question 31.** The author mentions the sources of energy such as wind, steam, petrol in the first paragraph to \_\_\_\_\_.

- A. suggest that electricity should be alternated with safer sources of energy
- B. emphasize the usefulness and adaptability of electricity
- C. imply that electricity is not the only useful source of energy
- D. discuss which source of energy can be a suitable alternative to electricity

**Question 32.** Before electricity, what was sometimes passed through pipes to heat rooms?

- A. Gas      B. Petrol      C. Steam      D. Hot wind

**Question 33.** What do we call machines that make electricity?

- A. Voltages      B. Electric magnets      C. Generators or turbines      D. Pipes and radiators

**Question 34.** The word "they" in the last paragraph refers to \_\_\_\_\_.

- A. harmful effects      B. the tides      C. scientists      D. new ways

**Question 35.** The word "**generate**" mostly refers to \_\_\_\_\_.

- A. produce      B. own
- C. do      D. get

**Question 36.** Which of the following power sources causes pollution by emitting harmful gases?

- A. Sunlight      B. Petrol      C. Water      D. Wind

**Question 37.** The best title for this passage could be \_\_\_\_\_.

- A. "Types of Power Plants"
- B. "Electricity: Harmful Effects on Our Life"
- C. "How to Produce Electricity"

**D.** “Why Electricity Is So Remarkable”

**IV. Writing. (2.0P)**

**Part 1. Circle the part (A, B, C or D) that needs correcting in each sentence. (0.45p)**
